

Introduction the Hospital

Razi Hospital, with an age of more than fifty years, is the largest educational, research and psychiatric treatment center in the northwestern region of Iran, which is located on a land of 8.5 hectares with a very beautiful and green landscape in the El Goli area, one of the pleasant climate areas of Tabriz city that has been built.

During these years, several fundamental renovations have been done in the structure and facilities of this hospital, and in addition to providing psychiatric services, it also provides various other services to those who seek help, which will be briefly mentioned below.

; Also, this center has succeeded in obtaining the International Patient Acceptance Certificate (IPD) since 2017 and is one of the first hospitals of Tabriz University of Medical Sciences to obtain this certificate.

This center has 650 approved beds and 450 active beds including:

106 general beds (special care, LTM, neurology department for women and men and internal department for women and men)

478 psychiatric beds (adult, elderly, addiction, child and teenagers).

40 specialist and subspecialist doctors and 3 treatment groups work in this center. The average number of outpatients and inpatients in the hospital is 45000 people.
